

Lockdown System

Focus's Lockdown System will physically lock your MWD into the muleshoe making it more rigid and reliable MWD system. Fixed mounted MWD systems are traditionally more reliable because of the added support it gives by not allowing the tool to bounce on bottom, which in turn minimizes the effects of shock and vibration on the tool.

Features

- The Focus threaded sleeve will mate with any muleshoe top connection, making it easier to replace in the field if necessary
- Hardened steel combined with the Focus Lower End and Muleshoe w/proprietary hard coating, the operational costs are substantially reduced
- Fixed mounting will reduce the effects of shock and vibration
- Enhances the life expectancy of the entire MWD system; Increased MTBF's
- Strategically designed to minimize wash around the top of the mule shoe, increasing the life expectancy of the entire assembly
- Provides confidence in getting the MWD seated properly and staying seated while drilling

"Quality & Service that Increases Efficiency and Drives Profitability"
